

Claims in application as amended

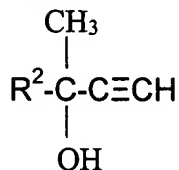

1. (Original) A composition for inhibiting the ability of mosquitoes to sense a target within a three dimensional environmental space having a land or base surface area, the composition comprising:

(A) at least one inhibiting compound selected from the group consisting of

3-methyl-1-alkene-3-ols of the formula:

and 3-methyl-1-alkyn-3-ols of the formula:

wherein R¹ and R² are each independently a saturated or unsaturated

aliphatic hydrocarbon group containing from 1 to about 12 carbon atoms, in

(B) a base vehicle comprising a porous or waxy medium,

the composition being capable of dispensing from the composition into the atmosphere of the three dimensional space the at least one inhibiting compound in an amount sufficient to provide an inhibiting effective amount of the at least one inhibiting compound sufficient to inhibit the ability of mosquitoes to sense a target in the three dimensional environmental space.

2. (Original) The composition according to Claim 1, wherein the composition is sufficient to provide in the atmosphere an inhibiting effective amount of the at least one inhibiting compound ranging from about $0.000005 \text{ g/hr/ft}^2$ to about 0.0004 g/hr/ft^2 per square footage of the land or base surface area of the three dimensional environmental space.
3. (Original) The composition according to Claim 1, wherein the composition is sufficient to provide in the atmosphere an inhibiting effective amount of the at least one inhibiting compound ranging from about $0.00015 \text{ g/hr/ft}^2$ to about 0.0002 g/hr/ft^2 per square footage of the land or base surface area of the three dimensional environmental space.
4. (Original) The composition according to Claim 1, wherein the at least one inhibiting compound is selected from nerolidol, 3-methyl-1-octen-3-ol, linalool and dehydrolinalool.
5. (Original) The composition according to Claim 1, wherein the at least one inhibiting compound comprises linalool.
6. (Withdrawn) The composition according to Claim 11 wherein the at least one inhibiting compound comprises dehydrolinalool.
7. (Original) The composition according to Claim 1, wherein the composition is capable of dispensing the at least one inhibiting compound into the atmosphere by a method selected from volatilization, evaporation, atomization and ionic dispersion of the at least one inhibiting compound.
8. (Withdrawn) The composition according to Claim 7, wherein the base vehicle is a porous medium and the composition is capable of dispensing the at least one inhibiting compound by fan-driven evaporation of the at least one inhibiting compound.

Claims 9 to 11 (Canceled)

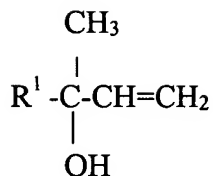

12. (Withdrawn) The composition according to Claim 5, wherein the vehicle is a porous medium and the linalool in the composition is capable of being dispensed from the composition by fan-driven evaporation of the linalool.

Claims 13 to 15 (Canceled)

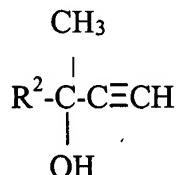

16. (Withdrawn) The composition according to Claim 6, wherein vehicle is a porous medium and the dehydrolinalool in the composition is capable of being dispensed from the composition by fan-driven evaporation of the dehydrolinalool.
17. (Withdrawn) The composition according to Claim 6, wherein the vehicle is a waxy medium and the dehydrolinalool in the composition is capable of being dispensed from the composition by fan-driven evaporation of the dehydrolinalool.
18. (Withdrawn) The composition according to Claim 6, wherein the dehydrolinalool in the composition is capable of being dispersed from the composition by atomization of the dehydrolinalool.
19. (Withdrawn) The composition according to Claim 6, wherein the dehydrolinalool in the composition is capable of being dispensed from the composition by ionic dispersion of the dehydrolinalool.

Claims 20-21 (Cancelled)

22. (Currently amended) A composition ~~of claim 20 wherein for inhibiting the ability of mosquitoes to sense a target within a three dimensional environmental space having a land or base surface area, the composition comprising:~~
- (A) ~~at least one inhibiting compound selected from the group consisting of 3-methyl 1-alken-3-ols of the formula~~

and 3-methyl-1-alkyn-3-ols of the formula:

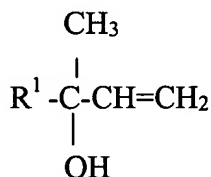

wherein R¹ and R² are each independently a saturated or unsaturated aliphatic hydrocarbon group containing from 1 to 12 carbon atoms, in

(B) a base vehicle that is a waxy medium,

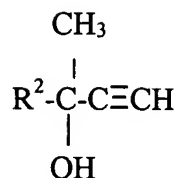

the composition is capable of dispensing by atomization from the composition into the atmosphere of the three dimensional space the at least one inhibiting compound in an amount sufficient to provide an inhibiting effective amount of the at least one inhibiting compound sufficient to inhibit the ability of mosquitoes to sense a target in the three dimensional environmental space wherein the dispensing is atomization.

23. (Currently amended) A composition of claim 20 for inhibiting the ability of mosquitoes to sense a target within a three dimensional environmental space having a land or base surface area, the composition comprising:

(A) at least one inhibiting compound selected from the group consisting of 3-methyl 1-alken-3-ols of the formula

and 3-methyl-1-alkyn-3-ols of the formula:

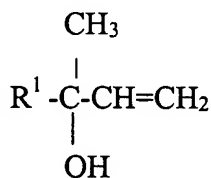

wherein R¹ and R² are each independently a saturated or unsaturated aliphatic hydrocarbon group containing from 1 to 12 carbon atoms, in

(B) a base vehicle that is a waxy medium,

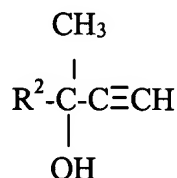

the composition is capable of dispensing by ionic dispersion from the composition into the atmosphere of the three dimensional space the at least one inhibiting compound in an amount sufficient to provide an inhibiting effective amount of the at least one inhibiting compound sufficient to inhibit the ability of mosquitoes to sense a target in the three dimensional environmental space wherein the dispensing method is ionic dispersion.

24. (Currently amended) A composition of claim 20 for inhibiting the ability of mosquitoes to sense a target within a three dimensional environmental space having a land or base surface area, the composition comprising:

(A) at least one inhibiting compound selected from the group consisting of 3-methyl 1-alken-3-ols of the formula

and 3-methyl-1-alkyn-3-ols of the formula:

wherein R¹ and R² are each independently a saturated or unsaturated aliphatic hydrocarbon group containing from 1 to 12 carbon atoms, in

~~(B) a base vehicle that is a waxy medium,
the composition is capable of dispensing by fan-driven evaporation from the composition into
the atmosphere of the three dimensional space the at least one inhibiting compound in an
amount sufficient to provide an inhibiting effective amount of the at least one inhibiting
compound sufficient to inhibit the ability of mosquitoes to sense a target in the three
dimensional environmental space wherein the dispensing method is fan-driven evaporation.~~

25. (Currently amended) A composition of claim 21 ~~wherein the dispensing method is
atomization 22 wherein the at least one inhibiting compound is linalool.~~
26. (Currentlly amended) A composition of claim 21 ~~wherein the dispensing method is ionic
dispersion 23 wherein the at least one inhibiting compound is linalool.~~
27. (Currently amended) A composition of claim 21 ~~wherein the dispensing method is fan-driven
evaporation 24 wherein the at least one inhibiting compound is linalool.~~
28. (New) A composition of claim 22 wherein the at least one inhibiting compound is
dehydrolinalool.
29. (New) A composition of claim 23 wherein the at least one inhibiting compound is
dehydrolinalool.
30. (New) A composition of claim 24 wherein the at least one inhibiting compound is
dehydrolinalool.
